Remarks

well structured

The course was extremely well organized and the fundamental topics in probability were covered in depth. In addition to it there were frequent rigorous quizzes which helped with solving the problems.

The course material was good enough but the volume of subjects being taught needs to be streamlined out since it felt quite a lot in one go for a course and few parts were left out or taught pretty fast due to the limited time. Ideally statistics topics should also be included in mathematical foundation for DS.

It was really insightful.

The course covers the fundamental Math requirements of Machine Learning. It is structured very organized way.

This course enhanced my knowledge wrt data science field. How probability, Linear algebra has played role in machine learning is clearly demonstrated.

good and useful course

pretty satisfied

Thanks

course was well organized and informative

The way Sir used to sit 3 to 4 hrs and teach us with all his efforts speaks volumes about his dedication.

Karthik Sir is very enthusiastic in taking the classes

Never met an instructor like Sir Karthik N who has been highly motivated and energetic to teach us probability and made a hard subject very interesting. I really liked sir's way of teaching and the way he planned and organised each and every lecture.

Karthik sir was very organised and prompt in sharing course related materials and organising quizzes and classes. I also liked his way of teaching.

Karthik Sir has been really active regarding, supporting us via different means , answering our questions , and engaging with us regularly. I really loved his way of teaching.

Teaching is excellent, no doubt. Prof Karthik is very enthusiastic teacher with great teaching skills.

Professor Karthik have very good teaching style and keeps us engaged during the course and is very prompt in responding to our queries on the chat. In my opinion he is the best among all the teachers who taught us this semester

Superb teacher.

Karthik Sir has taught the course with great passion and made sure the topics are understood by the students. He was also always available to clear our doubts, provided us with detailed explanation of our doubts both during the lecture and also after the lectures. I'm excited to take another course by Karthik sir.

THE BEST TEACHER I HAVE CAME ACCROSS IN MY LIFE

Both the instructors for this course were really good. They taught the course rigorously with utmost dedication. The lectures were interesting, deep, motivating and thought-provoking. Thanks to both the instructors. Especially Karthik P N sir has put a great amount of effort into teaching us and preparing the course materials. . His teaching style was great and really appreciated. And he was very responsive to all our queries.

Remarks

teach probability in next level first class awesome

Prof. Karthik was extremely meticulous with his teaching and put a lot of effort in covering the breadth and depth of this course. I thoroughly enjoyed the course and would definitely take another course with him in the future.

PN Karthik was a really good instructor with astute knowledge on the subject taught. He was well versed with the technology usage for the online mode of teaching. The course notes were really well articulated.

Thank You sir for teaching us in depth and helping us whenever we wanted to clarify any doubts

Instructor has put enormous amount of effort to enable the students. The energy is high and he has always replied the clarification request asap. Just sometimes few of the topics are covered in too detail which seems little complex for the fundamental course.

Karthik P N is highly enthusiastic professor, he addressed every question that we ask. He highly encouraged doubts after class and he has created that platform. He is extremely knowledgeable.

good instructor

..

Thanks

Karthik sir was thorough in teaching and taught rigorously.

Given a time period of only four months for a semester and as we are working professionals, it is a bit difficult to digest the content of the course. It would have been good if the course had been a little slower. Requesting to provide some more time between the lecture completion and the end-semester exam. We hardly have 4 to 5 days between these two.

I got introduced to a very different side of Probability.

Probability course is well organised

Probability part of the course was very interesting learned a lot more interesting concepts from the stochastic processes and I recommend everyone to study it

A good course for introduction to data science mathematics

The Probability course offered by Karthik Sir , has broadened my expertise and knowledge in this particular topic . But I would prefer, if some real world case studies , examples , and similar materials, would have been shared along side the general theory.

I feel there should be clear explanation on how math is getting used in ml, instead of purely focusing on math. Since I'm working professional, I would not be able to dedicate much time learning math, instead it would be beneficial to learn only those math concepts which are used in ml and go deep in it.

while the probability part was very good, how its not tuned as per data science. The volume of the course is much more and there are multiple topics which is not going to be very useful wr.t. data science. Instead I would recommend to shorten this subject and linear algebra and introduce statistics as well. The focus should be more on relevant topics for data science instead of research on these standalone topics.

Very well organized course. Could have included more information on probability distributions. Ex: <https://www.youtube.com/playlist?list=PLUL4u3cNGP61ATaGTFcSp7bhogloD2wHP>

Very well structured course which improved my understanding of the concepts I had learnt in my bachelors.

COURSE IS MORE MATHEMATICAL, DIDN'T FOUND MUCH CO RELATION WITH DATA SCIENCE

The structure of the course is well-designed and it is appropriately curated for data science. Thanks for that!
